

JLV Industries Pty Ltd

“Conveying Quality”

Corporate Profile

ABOUT US

JLV Industries Pty Ltd is a Western Australian company which has been constructing, installing and maintaining cable hauled conveyor systems for over twenty five years.

At our plant in Harvey, Western Australia, we design and manufacture a range of products for cable hauled conveyor systems. We have adopted the company motto, "Conveying Quality". We believe that this motto communicates both our total commitment to quality, and also our area of corporate interest in bulk materials handling.

OUR APPROACH

We work closely with our customers to ensure their satisfaction. Our products help our customers to reduce their total cost of ownership (TCO) of maintenance components and improve throughput by reducing downtime. Our products are designed to provide the maximum life possible by using patented technology to provide an edge over the competition.

BACKGROUND

JLV Industries has been involved in the mining and heavy construction industries since 1980. The original company was established by Bill Johnson and Doug Vance to construct the Worsley Alumina 51 km overland conveyor system in Western Australia. Many other major projects, both in Australia and overseas, have been successfully completed since.

In 1988, the directors of JLV decided to focus more on the design and manufacture of conveyor belt and conveyor system components. This change of focus was driven by the desire to control more closely the quality of the goods and services that JLV was supplying to customers. In 1992, JLV was awarded accreditation by SAI Global as a Quality Endorsed Company. In 2010 we were awarded a certificate of registration for complying with the requirements of AS/NZS ISO 9001:2008.

We are a private company based in Perth, Western Australia. The company has enjoyed a steady growth and maintains turnover and profitability, which enables us to reinvest a significant proportion into research and development of our new products. JLV specialises in the design and manufacture of Cable Hauled Conveyor System belting and components. JLV has two offices, the head office in Perth, and one in Harvey south of Perth, which is our manufacturing base. We also maintain a permanent presence at three customer's sites to assist with specialised maintenance tasks.
